PROFESSIONAL PROFILE

DevOps Engineer Intern at 360XpertSolutions (Feb 2026 – Present) with production-grade experience across AWS cloud infrastructure, Kubernetes orchestration, CI/CD automation, GitOps, infrastructure as code, security scanning, and observability. Proficient in containerization, configuration management with Ansible, and database technologies including PostgreSQL and MongoDB. Pursuing BSE at Bahria University, Karachi (7th Semester, Expected Jun 2027).

PROFESSIONAL EXPERIENCE

DevOps Engineer Intern

Feb 2026 – Present

360XpertSolutions · Karachi, Pakistan

Cloud Infrastructure (AWS)

- Architected VPC environments: public/private subnets, route tables, internet/NAT gateways, VPC peering, endpoints, PrivateLink.
- Managed IAM users, groups, roles, MFA, security groups, NACLs, GuardDuty, WAF, Firewall Manager, SCP, Landing Zone, Access Manager.
- Provisioned EC2 with Auto Scaling, EBS, ECS, EKS, Lambda, RDS, S3, CloudFront, Route 53, Global Accelerator.
- Wrote infrastructure as code using Terraform for full AWS environment provisioning.

CI/CD, GitOps & Security

- Built multi-stage Jenkins pipelines and GitHub Actions workflows with SonarQube code quality gates and Trivy/Snyk security scanning.
- Implemented GitOps workflows using ArgoCD and Flux for declarative Kubernetes deployments.
- Packaged applications as Helm charts for repeatable, versioned Kubernetes deployments.

Containers & Orchestration

- Containerized applications with Docker and Podman; managed Kubernetes clusters (Deployments, Services, Ingress, ConfigMaps, HPA).
- Explored Nomad as an alternative workload orchestrator for containerized and non-containerized applications.

Monitoring, Logging & Observability

- Deployed Prometheus and Grafana for metrics collection, alerting, and real-time dashboards.
- Configured Datadog and New Relic for APM and infrastructure monitoring; set up ELK Stack for centralized log aggregation.

Automation, Networking & Databases

- Automated server provisioning and configuration management using Ansible playbooks and roles.
- Configured Nginx, Caddy, Apache as reverse proxies; managed Tailscale VPN, Samba file servers, and Bash automation scripts.
- Worked with PostgreSQL and MongoDB; wrote SQL queries, managed schemas, and practiced NoSQL document modeling with Redis caching.

System Design Knowledge

- Familiar with Monolithic, Microservices, and Event-Driven architectures; understands CAP Theorem, stateless/stateful services, and service communication patterns.

PROJECTS

Distributed Task Manager — Full DevOps Implementation

Personal Project

2026

- Built production-grade microservices infrastructure: 3 independent services behind Nginx load balancer with round-robin traffic distribution.
- Services communicate via RabbitMQ event queues; Redis handles caching layer; MongoDB as primary database — 11 Docker containers total.
- GitHub Actions pipeline: automated tests, Docker image builds, and Trivy security scanning — all completing in under 90 seconds.
- Full observability via Prometheus metrics and Grafana dashboards monitoring all five service instances in real time.

Tech Stack: Docker · Node.js · MongoDB · Redis · RabbitMQ · Nginx · Prometheus · Grafana · GitHub Actions · Trivy

Full-Stack E-Commerce Platform — AWS Infrastructure & Terraform

2026

Team Project · Role: AWS Infrastructure + Terraform

- Built entire AWS infrastructure as code using Terraform: VPC with public/private subnets, EKS cluster, RDS PostgreSQL, S3, ECR, IAM.
- Set up GitHub repo with branch protection strategy (main, dev, feature); deployed Node.js backend on EC2 with PM2 connected to RDS via SSL.
- Served React frontend on EC2; full-stack application live on AWS with Kubernetes manifests for EKS deployment.

Tech Stack: Terraform · AWS (EKS, RDS, S3, ECR, VPC, EC2, IAM) · Docker · Kubernetes · GitHub Actions · Node.js · React · PostgreSQL · PM2

CI/CD Pipeline Health Dashboard

Personal Project

- Real-time Grafana dashboard integrated with Jenkins and GitHub Actions APIs to surface DORA metrics: build status, deployment frequency, lead time, and failure rate across multiple projects.

Tech Stack: Prometheus · Grafana · Jenkins · GitHub Actions

TECHNICAL SKILLS

Cloud & IaC	AWS (VPC, EC2, EKS, ECS, IAM, S3, RDS, Lambda, WAF, CloudFront, GuardDuty, Route 53, Auto Scaling, Global Accelerator), Terraform
Containers	Docker, Podman, Kubernetes, Helm, ArgoCD, Flux, GitOps, Nomad
CI/CD & Security	Jenkins, GitHub Actions, Git, GitHub, SonarQube, Trivy, Snyk
Monitoring	Prometheus, Grafana, Datadog, New Relic, ELK Stack (Elasticsearch, Logstash, Kibana)
Automation	Ansible, Bash Scripting, Linux, Disk Management
Web & Networking	Nginx, Caddy, Apache, Tailscale VPN, Samba
Databases	PostgreSQL, MongoDB, Redis, SQL, NoSQL
Deployment	Vercel, AWS EC2/EKS, Docker Compose
Other	Manual Software Testing (SQA), RabbitMQ, PM2

EDUCATION

BSE – Bachelor of Software Engineering

Expected Jun 2027

Bahria University, Karachi · 7th Semester

ADDITIONAL

SQA Manual Testing Course · Founder, Bahria Blaze Events · Languages: English (Professional), Urdu (Native)
